VIII 405. We proceed to investigate the syzygetic theory of general magic squares of the Third Order. Such squares do not exist in the case of the Second Order except in the trivial case a a a a but there are squares in which the row and column but not the diagonal properties are in evidence. For let such a square be a1 2 This must clearly have the form a. a. a, a, where if oo be some integer a,]a = a5) and we find S iZfaf = n.--., wherein we recall that the symbol fl denotes that in the ascending expansion of the function to which it is prefixed we are to retain only those terms which are free from the auxiliary X.
